THE BUCKSTONE

A railing system designed specifically for conservation areas and other similarly sensitive locations

- ◆ Hot forged and hand finished by our own blacksmiths
- ◆ No welding
- ◆ All solid bar—no hollow sections
- ◆ Galvanised for lasting protection
- ◆ Compliant with modern health and safety requirements
- ◆ Pailings and posts leaded and caulked into copings

The Buckstone conservation railing system has been designed specifically for conservation areas and other similarly sensitive locations. The system embodies traditional methods of manufacture and installation appropriate to areas demanding close attention to detail.

Components are hot-forged and pinned or bolted together with no unsightly welding, all by our own skilled blacksmiths. Hot-dip galvanising ensures long life. The system is also available in genuine wrought iron at additional cost.

Our unique service includes a full survey of your site, the design, manufacture and installation of a system suited to your specific requirements.

Posts and pailings or posts and panels, gates, bespoke posts, feature entrances, arches and other embellishments are all possible. Please contact us for further details.
